### The vi text editor cont'd

VI editor is an interactive editor that you can use to create and modify test files.

<sup>1</sup>It is used when the desktop environment window system is not available.

#### VI three basic modes

- **Command mode** 
  - Default mode
  - Perform commands to delete, copy, ...

#### VI three basic modes

- **Edit mode** 
  - Enter text into the file
- Last line mode
  - Advanced editing commands
  - To access it, enter a colon (:) while in the command mode

#### To enter edit mode

- i Inserts text before the cursor
- Opens a new blank line below the cursor
- **a** Appends text after the cursor

<sup>1</sup>After editing Press **esc** to enter command mode

#### The syntax of vi command

- <sup>I</sup> vi
- vi filename
- vi options filename

To recover a file

vi -r filename

#### Viewing files in Read-only mode

- view filename
  - Perform the :q command exit

#### Inserting and appending text

- A append text at the end of the line
- I insert text at the beginning of the line
- opens a new line above the cursor

#### Moving the cursor within the vi

- h, left arrow, or backspace: left one character
- j or down arrow: down one line
- k or up arrow: up one line
- I, right arrow or space: right one character

#### Moving the cursor within the vi (cont.)

- w forward one word
- b back one word
- e to the end of the current word
- 0 (zero) to the beginning of the line

#### Moving the cursor within the vi (cont.)

- G Goes to the last line of the file
- n Goes to Line n

#### Substitute and delete text

- x Deletes a character at the cursor.
- dw Deletes a word or part of the word to the right of the cursor.
- dd Deletes the line containing the cursor.
- Deletes the line from the cursor to the right end of the line.
- :n,nd Deletes Lines n through n (in last line mode)

#### Search and replace

- /string Searches forward for the string.
- ?string Searches backward for the string.
- n Searches for the next occurrence of the string.
- N Searches for the previous occurrence of the string.
- :%s/old/new/g Searches for the old string and replaces it with the new string globally. (In the last line mode)

#### Copy and paste

- yy Yank a copy of a line.
- **p** Put yanked text under the line containing the cursor.
- P (upper Case) Put yanked text before the line containing the cursor.
- :n,n co n Copy Lines n though n and puts them after Line n. (Last Line Mode)
- :n,n m n Move Lines n through n to Line n. (Last Line Mode)

#### Save and quit

- w save the file
- :w new\_file save as new file
- ":wq, :x save and quit
- :q! quit without saving

#### Customizing vi session

- :set nu, :set nonu show and hide line numbers
- :set ic, :set noic ignore or be case sensitive
- **:set showmode, :set noshowmode** display or turn off mode

## **Editing Files with gedit**

The gedit text editor is a graphical tool for editing text files.

The gedit window is launched by selecting:

<sup>□</sup> Search menu → gedit

# **Users and Groups databases**

•The /etc/passwd file

username:x:uid:gid:comment:home-directory:login-shell

# **Users and Groups databases**

•The /etc/shadow file

username:encrypted passwd:last

changed:min:max:warn:??:expire:future-use

## **Users and Groups databases**

•The /etc/group file

groupname:x:gid:comma-separated list of group members

•The /etc/gshadow file???

## Adding a new user account

#useradd username

•The useradd command populates user home directories from the /etc/skel directory.

• Adding multiple user accounts

# newusers filename

## **User Password**

- # passwd username
- \$ passwd

## **Password Aging Policies**

- The chage command sets up password aging
- # chage [options] username
- Options
  - -m: to change the min number of days between password changes
  - —-M: to change the max number of days between password changes
  - —-E date: change the expiration date for the account
  - —-W: change the number of days to start warning before a password change will be required

## **Modifying user accounts**

- •To change a user's account information, you can:
  - —Edit the /etc/passwd or /etc/shadow files manually
  - —Use the usermod & chage command discussed later

## **Modifying user accounts**

- •To change a user's account information, you can:
  - —Use the usermod command:
  - usermod [options] username
    - Useful options
      - To changes the login name use -I <login name>
      - To lock the password use -L
      - To unlock the password use -U

## **Deleting a user account**

- •To delete a user account you can
  - —Manually remove the user from
    - /etc/passwd file
    - /etc/shadow file
    - /etc/group file
    - remove the user's home directory (/home/username)
    - and mail spool file (/var/spool/mail/username)
  - —Use the userdel command.
- # userdel [-r] username

# **Switching Accounts**

# su [username]

# User private group scheme

- •Ubuntu assigning user a primary group for which they are the sole members.
- This "private" primary group has the same name as the user's username

## **Managing Groups**

- Creating New Group
- # groupadd groupname
- Modifying an Existing Group
- # groupmod [options] groupname
- •Deleting a Certain Group
- # groupdel groupname

## Managing Groups cont'd

- You can use the gpasswd command to define
- •gpasswd -a USERNAME GROUPNAME
  - —Add members to Group
  - create or change group passwords

### **Changing Active Group**

- •To display the groups you are member in use groups command groups
- other root bin sys adm uucp mail tty lp
- To switch between groups you are member in, use newgrp command.

  newgrp group

#### The whoami command

After switching into several users, it is a sever issue to know your current (effective)

user

whoami

Root

•id

uid=101(user1) gid=100(user1)groups=101(user1)

id user2

uid=500(user2)gid=500(user2) groups=500 (user2)

#### The id command

- Displays
  - Effective user id
  - Effective user name
  - Effective group id
  - Effective group name
- Examples
- $^{ullet}$ id

uid=101(user1) gid=100(user1)groups=101(user1)

id user2

uid=500(user2)gid=500(user2) groups=500 (user2)

### **File Ownership and Permissions**

Every file and directory has both **user** and **group** ownership. A newly-created file will

be owned by:

- The user who creates it
- —That user's primary group

### **File Ownership and Permissions**

- •File ownership can be changed using chown command.
- Example

```
# chown user1 file1
```

# chown user1:group1 file1

# chown :group1 file1

### **Security Scheme**

- •Each file has an owner and assigned to a group.
- •Linux allows users to set permissions on files and directories to protect them.
- Permissions are assigned to
  - File owner
  - —Members of the group the file assigned to
  - —All other users
- Permissions can only be changed by the owner and root

# **Permission Notations**

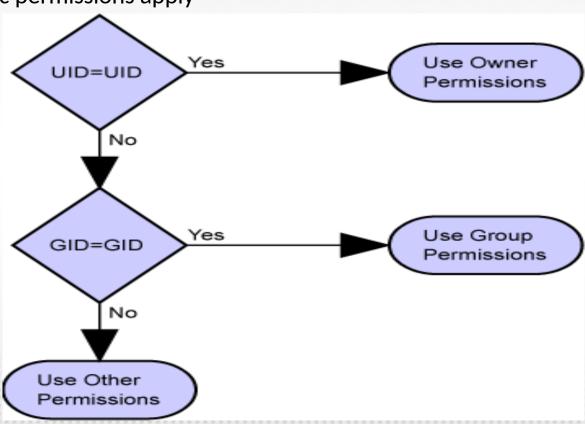

Permission	Access for a File	Access for a Directory
Read	You can display file contents and copy the file.	You can list the directory contents with the Is command
Write	You can modify the file contents.	If you also have execute access, you can add and delete files in the directory.
Execute	You can execute the file if it is an executable. You can execute a shell script if you also have read and execute permissions.	You can use the cd command to access the directory. If you also have read access, you can run the Is -I command on the directory to list contents.

## **Determining Permissions**

The most specific permissions apply

## **Changing the Permissions**

#### chmod permission filename

- Permissions are specified in either
  - —Symbolic mode
    - Who
      - u: Owner permissions
      - g: Group permissions
      - o: Other permissions
      - a: all permissions

## **Changing the Permissions**

- Permissions are specified in either
  - —Symbolic mode
    - Operator
      - + Add permissions
      - Remove permissions
      - = Assign permissions absolutely
    - Permissions
      - r: read
      - w: write
      - x: execute

# **Changing the Permissions**

- Permissions are specified in either
  - —Octal mode
    - 4 read
    - 2 write
    - 1 execute

## **Examples**

#### ls -1 file1

-rw-r--r-- 1 user1 staff 1319 Mar 22 14:51 file1

chmod o-r file1

ls -1 file1

-rw-r---- 1 user1 staff 1319 Mar 22 14:51 file1

chmod g-r file1

ls -1 file1

-rw----- 1 user1 staff 1319 Mar 22 14:51 file1

### **Examples Cont'd**

```
chmod u+x, go+r file1
```

ls -l file1

-rwxr--r-- 1 user1 staff 1319 Mar 22 14:51 file1

chmod a=rw file1

ls -1 file1

-rw-rw-rw- 1 user1 staff 1319 Mar 22 14:51 file1

chmod 555 file1

ls -1 file1

-r-xr-xr-x 1 user1 staff 1319 Mar 22 14:51 file1

## **Examples Cont'd**

#### chmod 775 file1

ls -l file1

-rwxrwxr-x 1 user1 staff 1319 Mar 22 14:51 file1

chmod 755 file1

ls -l file1

-rwxr-xr-x 1 user1 staff 1319 Mar 22 14:51 file1
